

Assignment -2

Name: MannoJ kumar S

TOPIC: Assignment on temperature and humidity sensing and alarm automation using python

CODE:

```
import random
```

```
while(True):
```

```
    a=random.randint(10,99)
```

```
    b=random.randint(10,99)
```

```
    if(a>35 and b>60):
```

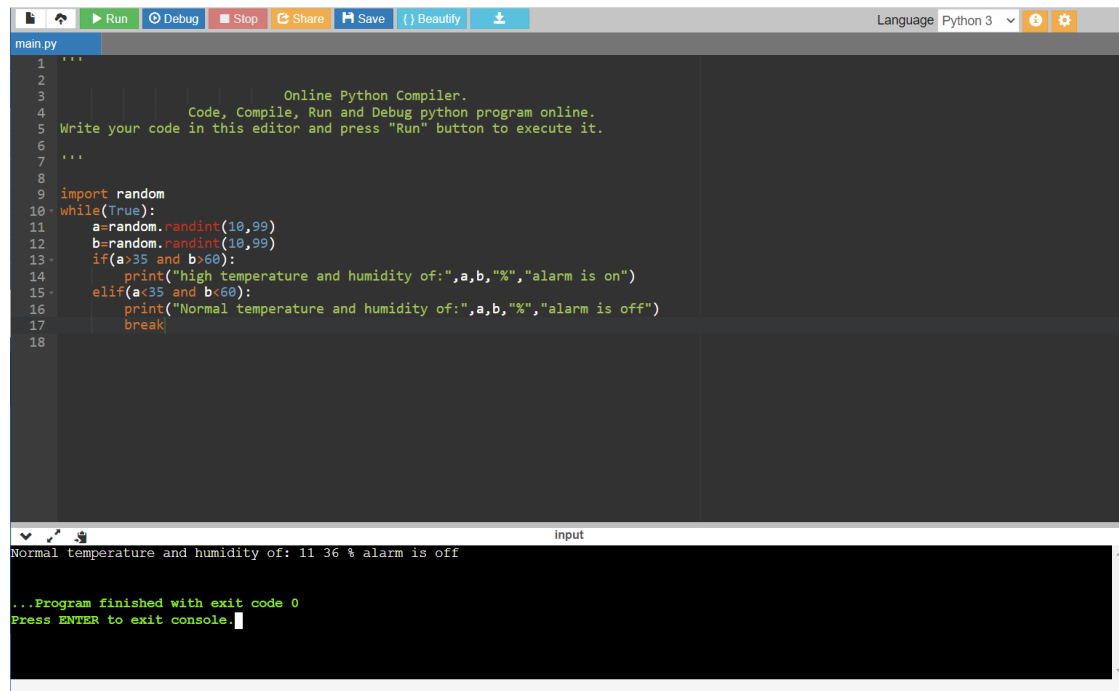

```
        print("high temperature and humidity of:",a,b,"% ","alarm is on")
```

```
    elif(a<35 and b<60):
```

```
        print("Normal temperature and humidity of:",a,b,"% ","alarm is off")
```

```
    break
```

OUTPUT

The screenshot shows an online Python compiler interface. At the top, there is a toolbar with icons for file operations, running, debugging, stopping, sharing, saving, and beautifying code. The language is set to Python 3. The code editor contains a Python script that generates random temperature and humidity values and checks if an alarm should be on or off. The output console shows the result of the execution: 'Normal temperature and humidity of: 11 36 % alarm is off'. The program finished with exit code 0.
